Subject: GM Discussion
Location: AA-Room-Office-N66-ConfRoom/AA-OTaq-Office
Start: 1/21/2015 7:00:00 PM
End: 1/21/2015 8:30:00 PM
Show Time As: Busy

Andy – the soonest I can get a conference room (we are losing two prime conference rooms for an extended period) and staff is January 21. Let me know if this will work for GM.

Thanks,

David

Requested Discussion Topics –

- Brief introduction for EPA to California GM-modified PHEV test procedures
- Diesel ammonia slip requirements – limitations and levels allowed documentation other than 86.1810-01(a)
- Allow test fuel for certification – Should be in the Final Rule tables
- Diesel EGR usage – ARB expecting manufacturers using EGR to flow EGR at all operating conditions
- Bin110 SFTP standards – Manufacturer defines FEL or uses LEVIII

- Confirm Bin395 can be performed at 120K useful life. But if done at 150K counts as Tier3
- AECD documentation

Subject: RE:

I'm going to expand a little on the topics below (see red text edits below). I'll likely need a data-show since we (GM'ers) can't do anything without it.

See you tomorrow,

Andy

From: Wright, DavidA [mailto:Wright.DavidA@epa.gov]
Sent: Tuesday, January 20, 2015 11:16 AM
To: Andrew S. Barren
Subject:

Andy,

I just want to confirm you are still planning to come to EPA tomorrow at 2 pm to discuss the following issues –

Requested Discussion Topics –

- Brief introduction for EPA to California GM-modified PHEV test procedures – I'll review the document we sent to ARB back in 2011 regarding the high level attributes of the test program and share with you what we discussed at the time with EPA (Chris Nevers / Steve Healy). I'm also hoping to roll out what our test plan is for the next coming years with respect to test procedures (GM modified / EPA J1711 / CARB new procedures)
- Diesel ammonia slip requirements – limitations and levels allowed documentation other than 86.1810-01(a) – looking for something more concrete to share internally. Limited to diesels with SCR I assume, on FTP only?
- Allow test fuel for certification – Should be in the Final Rule tables – this is a timing thing, when can we use CA fuel for EPA testing, and visa versa.
- Diesel EGR usage – ARB expecting manufacturers using EGR to flow EGR at all operating conditions – we briefly covered this at the last meeting. I think we're on the same page.
- Bin110 SFTP standards – Manufacturer defines FEL or uses LEVIII – what SFTP target do we use since these applications are intended to be purely carryover bin 4's (unless we decide to do it on E10 / 150K).
- Confirm Bin395 can be performed at 120K useful life. But if done at 150K counts as Tier3 – just looking for confirmation from EPA this is acceptable.
- AECD documentation – specific to light duty diesels. Guidance VPCD-98-13 outlines how the HD AECD's need to be developed (great detail), but this is limited to HD diesel engines (HDDE) I believe. In the past we bridged both HD engine and vehicle, so it made sense to just submit the full blown HDDE version. We may not have engine certs in the future, so can we revert to the lest overous LD version for LD and HD vehicles?

I still owe you guys a copy of our early Tier 3 credit worksheet (my bad, just busy)

Let me know if you have any changes to the topics.

Regards,

David

Subject: EGR flow requirements on LD diesels

Duc and Jackie,

Wondering if you have time for a call tomorrow (Friday, Jan 23rd) to discuss my favorite topic; ARB's requirement to flow EGR at all times on diesel engines? I'm open all day.

I'd like to recap the issue here.

CBI / Ex. 4

I reviewed our position and your concerns with EPA on two occasions. They are in agreement with GM's position. We are currently taking costly measures to meet ARB position, but as we continue to review this issue, the more we feel we have a valid position and will continue to pursue (hence my request for a call).

Thanks for the consideration and time.

David,

I agree. We may also either ask CARB what they think or have GM follow-up with CARB and let us know. I'm concerned that if the changes impact or are due to OBD, I want to make sure they are comfortable.

Thanks,
Linc

Subject: Re: GM Press Release in Europe on fuel consumption and NOx emissions

Thanks very much for this, Byron.

Julia P. Valentine
Sent from USEPA iPhone

On Dec 15, 2015, at 8:04 AM, Bunker, Byron <bunker.byron@epa.gov> wrote:

Earlier today, General Motors Opel division in Germany announced several changes they were making in response to ongoing concerns about real world fuel economy and NOx emissions. Attached is Opel's press release. GM is very keen to differentiate between their European and US products in this regard.

If GM is asked what this announcement will mean for the US they intend to say:

These improvements on Opel vehicles with diesel engines and SCR systems are not relevant to the Chevrolet and GMC vehicles with diesel engines sold in USA for several reasons:

- <!--[if !supportLists]--><!--[endif]--> Vehicles with diesel engines sold in USA are different models than those for European and Korean markets. Emission system development, validation, and certification for US vehicles was conducted independently from vehicles for sale in EU or Korea.
- <!--[if !supportLists]--><!--[endif]--> Vehicles certified for sale in US through EPA and ARB:

- are developed to a wider range of operating conditions than those required for Europe, encompassed by specific test procedures (US06, SC03, 20°/50°F FTP, etc.);
- demonstrate continuity of emission control system effectiveness throughout a broad range of operating conditions; and
- have Emission System Control strategies well-documented and disclosed for review and approval by EPA and ARB through AECD documentation.

They are also calling for more transparency in the European process.

“Opel CEO Dr. Neumann also calls for improving the transparency between automakers and authorities in Europe. “In the USA, the companies disclose their complete calibration philosophy to authorities. I would like to see us embrace this practice in Europe.” In this context, the Opel CEO also wants to suggest that all automakers that are active in Europe take part in a negotiated agreement for more transparency.”

Buried in this press release is Opel’s response to the German NGO’s claims of a defeat device on the SCR equipped Opel Zafira.

Subject: Opel press release on fuel consumption and NOx emissions

Today's Opel press release is attached and a link provided here:

<http://media.opel.com/media/intl/en/opel/news.detail.html/content/Pages/news/intl/en/2015/opel/12-15-offensive-fuel-consumption-emissions.html>

Corresponding actions are also taking place for Chevrolet vehicles with diesel engines and SCR systems sold in Korea. (Korea's emission regulations for diesel vehicle essentially mirror the current regulations in EU. The diesel engines and emission control systems in our Korean-market vehicles are common with those sold in Europe.)

As we discussed, the "improvements toward RDE" will primarily involve EGR and SCR system calibrations to improve NOx effectiveness over a wider band of ambient temperature operating conditions.

These improvements on Opel vehicles with diesel engines and SCR systems are not relevant to the Chevrolet and GMC vehicles with diesel engines sold in USA for several reasons:

- <!--[if !supportLists]--><!--[endif]--> Vehicles with diesel engines sold in USA are different models than those for European and Korean markets. Emission system development, validation, and certification for US vehicles was conducted independently from vehicles for sale in EU or Korea.
- <!--[if !supportLists]--><!--[endif]--> Vehicles certified for sale in US through EPA and ARB:
 - <!--[if !supportLists]--><!--[endif]--> are developed to a wider range of operating conditions than those required for Europe, encompassed by specific test procedures (US06, SC03, 20°/50°F FTP, etc.);
 - <!--[if !supportLists]--><!--[endif]--> demonstrate continuity of emission control system effectiveness throughout a broad range of operating conditions; and
 - <!--[if !supportLists]--><!--[endif]--> have Emission System Control strategies well-documented and disclosed for review and approval by EPA and ARB through AECD documentation.

Subject: GM Silverado Update
Location: N12
Start: 10/11/2016 3:30:00 PM
End: 10/11/2016 4:00:00 PM
Show Time As: Busy

Dan – thanks for the great summary of the Silverado status (copied below). Can the three of us get together on Tuesday to discuss?

Thanks – Byron

Testing Summary:

- We currently have two 2017 Silverado diesel pickups in our possession. One is from the 2B Test Group; the other from the Class 3 Test Group.
- The first pickup is being outfitted with a PEMS. The outfit will be complete Tuesday COB if everything goes smoothly. Deliberative Process / Ex. 5
- Deliberative Process / Ex. 5
- The second pickup will be monitored using the vehicle's onboard computer to look at NOx concentrations while driving. A data file was taken yesterday; I anticipate taking more throughout next week.
- David Wright and I already observed confirmatory (lab) certification tests of these Test Groups at the Milford PG.
- Deliberative Process / Ex. 5

Application summary:

- As of this morning, the applications for certification for these two vehicles are not in the request for certification queue (They have CSI's in the system but they have not done the final step in the process where the application is locked and sent to their certification rep).
- David Wright is the cert rep; he is out until: Personal Matters / Ex. 6
- We have completed the first review of the AECD document. GM has addressed most of our questions. ARB staff also has questions for GM regarding this which GM has answered or is working on.

Deliberative Process / Ex. 5

Final summary:

I do not anticipate that we would be ready to issue a certificate before 10/21.

Andy – the soonest I can get a conference room (we are losing two prime conference rooms for an extended period) and staff is January 21. Let me know if this will work for GM.

Thanks,

David

Requested Discussion Topics –

- Brief introduction for EPA to California GM-modified PHEV test procedures
- Diesel ammonia slip requirements – limitations and levels allowed documentation other than 86.1810-01(a)
- Allow test fuel for certification – Should be in the Final Rule tables

- Diesel EGR usage – ARB expecting manufacturers using EGR to flow EGR at all operating conditions
- Bin110 SFTP standards – Manufacturer defines FEL or uses LEVIII
- Confirm Bin395 can be performed at 120K useful life. But if done at 150K counts as Tier3
- AECD documentation

David –

I am forwarding you a copy of the Application for Certification for the subject test groups so that you can begin your review. We are waiting on OBD approval, so cannot do an official Request for Certificate yet. When we do receive OBD approval, the timing will be critical to get these Certificates issued.

Thanks!

Kim

Subject: RE: [EXTERNAL] RE: Updated on 6.6L certification requests

Thanks David. Yeah I saw all the emails flying around. The team is working on the responses. I am well aware and I knew this would be the case that both agencies need to be satisfied before any approval is given. Thanks for keeping me in the loop.
I would suggest working with Bob Vito directly this week if you have any questions.

Subject: [EXTERNAL] RE: Updated on 6.6L certification requests

Doug,

After sending my note to you this morning, California submitted a further question to Bob Vito (I believe you were cc'd on the e-mail) regarding PBI / Ex. 4 At this time, EPA is awaiting GM's response to this question. In addition, I have asked Bob to confirm the start of production date for these test groups. I expect to hear GM's response to the California AECD question along with our question regarding SOP tomorrow.

Regards,

David

Subject: [EXTERNAL] Updated on 6.6L certification requests

Doug,

I apologize for not sending you a note before leaving Friday. As you know, EPA did not issue a certificate for the diesel test groups on Friday. At this time, I am waiting to hear from CARB regarding their status and any questions they may have regarding our review or their review of your application. I expect to hear from California before the close of business today regarding their review and any further questions. I will provide you an update later today if necessary.

In addition, EPA has not completed all of the additional screening tests planned for the two heavy-duty test groups. The additional testing is going to be performed. Therefore, it is possible that there will be additional requests for information and details regarding these test groups post certification.

Please feel free to contact me if you have any additional questions or need additional information.

Regards,

David

Sara,

I have done a number of document searches with the Verify features I have (and think I know how to use) looking for the GM 2013 MY AECD Document Name and Letter Designation provided by GM in the appended e-mail. To date I have not found any documents in Verify. I am wondering if there is any way one of your staff could definitively search the database and tell me that there is no file titled CBI_DGMX_CORRES_DIESEL_RFA1AECD.pdf in Verify, or, if they do find it tell me how to access the file.

This is my last step before I tell GM the file is not in Verify.

Thanks,

David

Subject: [EXTERNAL] AECDs for 2013 GM Duramax 6.6 L diesel

Doug,

EPA is planning to review the AECDs for the 2013 GM Duramax 6.6 L. I did a quick search for AECD documents in Verify and found the file CBI_BGMX_COMMON_AECD_DIESEL_.pdf which includes a footer identifying the document as Modulation of Emission Control Strategies.docx. Page 9 of the document includes a table with the heading "Appendix Modulation of Emission Control Strategies (GM 6.6L Duramax)". This file has a footer date of January 25, 2010 and was submitted to Verify for the 2011 MY Initial Application for Certification. The document title GM entered into Verify is GM COMMON SEC – DIESEL AECD.

I did not find any other AECD documents in Verify for the 6.6 L Duramax until the 2017 MY submittal for the redesigned engine.

I am interested in knowing if there are other 6.6L GM Duramax AECD documents which have been submitted to the Agency after the 2011 MY AECD document and prior to the 2017 Duramax submittal which my search did not identify. If there are please provide me with the document title so that I can locate those documents. In particular, as noted above, EPA is interested in the 2013 GM Duramax 6.6 L.

Also, if there are no other documents in Verify for MYs 2012 through 2016 I am interested in knowing if the 2011 document describes all of the AECDs which would also be present in the 2013 GM Duramax, i.e. between 2011 and 2013 no additional AECDs were implemented and none of the described AECDs were modified or removed.

Let me know if you have any additional questions regarding these requests.

Regards,

David

Subject: Freeze/thaw DEF requirement

David,

Sorry for the flurry of questions. A natural outcome of a perfect storm – personnel changes and new regulations. In this case, our long time diesel expert left GM and we continue to rebuild the tribal knowledge he had. In this case, it's DEF freeze/thaw requirements (per my phone message I left yesterday).

Attached are three documents. One EPA/ARB workshop presentation in 2010, a EPA off-road workshop presentation in 2011, and a 2009 EPA Cisd. All discuss DEF thaw requirements (via an example test procedure) to be an acceptable AECD (procedure copied below).

PBI / Ex. 4

I'll be honest, there was dialogue about a 20 minute (either first or full dose) requirement. I cannot find anything in my documentation or searches that confirms that requirement, only the attached is what I've found of value. So I need your help.

- A.) Is the requirement based on first dose and full dose, or just full dose?
- B.) Are the bogies; First dose < 40 minutes, Full dose < 70 minutes at 20F?
- C.) Is our test procedure acceptable to satisfy the AECD concern? Without slosh (part 3.b.), it might be too severe.

Thanks for your help.

Andy Barren
GM LLC

Test Procedure for Performance of DEF Dosing Freeze Protection Systems:

1. Prior to Procedure:
 - Temperature: DEF at 20° F (maximum)
2. Soak Conditions:
 - Temperature: 0° F (maximum)
 - Time: 72 hours or solid DEF (whichever occurs first)
3. Test Duty Cycle:
 - Temperature: 0° F (maximum)
 - Time: 70 minutes (maximum)
 - a. Start engine and idle with no engine load for 20 minutes
 - b. Operate engine at no more than 40% load at rated speed for up to 50 minutes

~~*~*~*~*~*~*~*~*

Andy – the soonest I can get a conference room (we are losing two prime conference rooms for an extended period) and staff is January 21. Let me know if this will work for GM.

Thanks,

David

Requested Discussion Topics –

- Brief introduction for EPA to California GM-modified PHEV test procedures

- Diesel ammonia slip requirements – limitations and levels allowed documentation other than 86.1810-01(a)
- Allow test fuel for certification – Should be in the Final Rule tables
- Diesel EGR usage – ARB expecting manufacturers using EGR to flow EGR at all operating conditions
- Bin110 SFTP standards – Manufacturer defines FEL or uses LEVIII
- Confirm Bin395 can be performed at 120K useful life. But if done at 150K counts as Tier3
- AECD documentation

Sent: Tuesday, January 20, 2015 11:16 AM
To: Andrew S. Barren
Subject:

Andy,

I just want to confirm you are still planning to come to EPA tomorrow at 2 pm to discuss the following issues –

Requested Discussion Topics –

- Brief introduction for EPA to California GM-modified PHEV test procedures – I'll review the document we sent to ARB back in 2011 regarding the high level attributes of the test program and share with you what we discussed at the time with EPA (Chris Nevers / Steve Healy). I'm also hoping to roll out what our test plan is for the next coming years with respect to test procedures (GM modified / EPA J1711 / CARB new procedures)
- Diesel ammonia slip requirements – limitations and levels allowed documentation other than 86.1810-01(a) – looking for something more concrete to share internally. Limited to diesels with SCR I assume, on FTP only?
- Allow test fuel for certification – Should be in the Final Rule tables – this is a timing thing, when can we use CA fuel for EPA testing, and visa versa.
- Diesel EGR usage – ARB expecting manufacturers using EGR to flow EGR at all operating conditions – we briefly covered this at the last meeting. I think we're on the same page.
- Bin110 SFTP standards – Manufacturer defines FEL or uses LEVIII – what SFTP target do we use since these applications are intended to be purely carryover bin 4's (unless we decide to do it on E10 / 150K).

- Confirm Bin395 can be performed at 120K useful life. But if done at 150K counts as Tier3 – just looking for confirmation from EPA this is acceptable.
- AECD documentation – specific to light duty diesels. Guidance VPCD-98-13 outlines how the HD AECD's need to be developed (great detail), but this is limited to HD diesel engines (HDDE) I believe. In the past we bridged both HD engine and vehicle, so it made sense to just submit the full blown HDDE version. We may not have engine certs in the future, so can we revert to the lest overous LD version for LD and HD vehicles?

I still owe you guys a copy of our early Tier 3 credit worksheet (my bad, just busy)

Let me know if you have any changes to the topics.

Regards,

David

Seongyup,

The attachment contains the answers to your 6.6L diesel AECD questions. The AECD document has also been updated as a result of the questions. A copy is attached, and Kim Sinacola will submit it into DMS.

The AECD document has been updated as follows:

PBI / Ex. 4

Thanks
Bob Vito
